

## 24/7 Automatic Fall Detection System

Falls can happen to anyone! However, for aging adults, as well as individuals with chronic medical illnesses, they are a very serious concern. Falls can occasionally lead to debilitating injuries, brain trauma, and in extreme circumstances, even death. According to the Center for Disease Control and Prevention, the chances of an individual falling doubles after they have already fallen once, and those that have fallen are more likely to develop a fear of falling again.

Our customers benefit from having immediate access to the SafeGuard Emergency Response Center. SafeGuard employs certified professionals who are skilled in using personalized emergency response protocols. Additionally, they can remotely talk to and view the subscribers' profile, send help, issue reminders, and reassure that help is on the way or confirm help has arrived when an emergency occurs.

The HomeSafe with AutoFall Medical Alert System is the ideal automatic fall detection and personal safety solution for seniors, individuals with medical conditions, and those with history or fear of falling. With a simple push of a button, emergency medical help can be on its way, 24 hours a day/7 days a week. HomeSafe with AutoFall enables individuals to enjoy dignified carefree living with the security and peace of mind that if a fall or medical emergency does occur, the system's built-in automatic fall detection sensors and innovative medical alert technology will immediately signal the SafeGuard Emergency Response Center.

The HomeSafe with AutoFall System is equipped with automatic fall detection sensors that can detect abnormal changes in vertical and horizontal positioning. If a fall is detected and no correction in body movement occurs after 10 seconds (indicating a loss of consciousness), the HomeSafe with AutoFall System will immediately activate the two-way voice communication between the unit and the SafeGuard Emergency Response Center. A SafeGuard Emergency Response Center specialist will promptly receive the call and send the required medical help, followed by notifying any prearranged contacts of the emergency.

SafeGuard's Emergency Response staff is extensively trained and qualified in dealing with urgent and non-urgent situations and falls; providing reliable fall detection response and emergency medical monitoring services 24 hours a day/365 days a year.

The HomeSafe with AutoFall is the ideal solution for combining automatic fall detection features within a medical alert system for individuals searching for a way to safely live independently without the added concern of falling.
